

Zinnias

- ❖ Start with a boundary- measure width and height
- ❖ Add center. If flower is convex, folding over, then center is higher in oval.

- ❖ Add a spiral that gradually gets bigger
- ❖ Fill in petals. Petals meet the ones above them in their center. Petals automatically get bigger as they go toward boundary.
- ❖ Don't worry about petals in back that you cannot see.
- ❖ Begin shading in between petals from dark corner out softly onto petal below.
- ❖ Shade left side of flower as you would a ball.

To create a little flower is the labour of ages." ...William Blake
"Implication is as important as detailed explanation" ...
Katie Lee
